

DIEGO URIBE

SENIOR SYSTEMS ENGINEER

786-295-3108 | diegouribe@gmail.com | <https://www.linkedin.com/in/diegouribe>

PROFILE

Accomplished IT professional with extensive experience in managing large-scale datacenter operations to ensure optimal performance, security, and availability for thousands of servers.

Remarkable efficiency in executing system upgrades, migrations, and patch management while maintaining strict regulatory compliance to prevent operational disruptions. Proven track record in leading cross-functional teams, coordinating with vendors, and developing streamlined standard operating procedures that enhance reliability and efficiency. Excel in mentoring junior engineers, driving initiatives that improve infrastructure resilience, and aligning technical operations with organizational goals to support long-term strategic objectives.

AREAS OF EXPERTISE

- Multi-region Datacenter Management
- VMware vSphere & ESXi Administration
- Disaster Recovery & Security Compliance
- Identity & Access Management
- Patch Management & Compliance
- Cisco UCS Blade Server Administration
- PowerShell & Python Scripting
- Commvault Backup & Data Protection
- Linux Server Provisioning & Automation

PROFESSIONAL EXPERIENCE

Systems Engineer | eSolutionsFirst, Tampa, FL

2024 – 2026

Oversaw 16 Cisco UCS blade servers and associated software in a multi-domain environment via Cisco UCS Central to ensure uninterrupted operations and system reliability. Maintain performance and availability of 10,000+ VMware virtual servers (versions 7.0.3/8.0.2) across US datacenters with Windows (2016–2022) and RHEL (8.6, 8.8).

Key Contributions:

- Improved system uptime and SLA adherence by coordinating hardware replacement projects with internal teams and vendors.
- Ensured compliance with legal, regulatory, and industry standards by enforcing security policies for VMware and Microsoft Azure infrastructures.
- Increased accuracy of AI-driven insights by processing and filtering questionnaire response data for sentiment analysis using AI Foundry and Python in Azure.
- Enabled scalable content publishing and enhanced agent manageability by engineering, deploying, and optimizing MCP servers for the AI Capstone project.
- Contributed to daily and bi-weekly operational meetings on patch management, server administration, and BigFix SOPs aimed at providing actionable updates and recommendations.
- Boosted support efficiency and response times by streamlining escalation processes and prioritizing requests through collaboration with stakeholders on ServiceNow and Service Desk platforms.
- Minimized operational downtime by administering and troubleshooting MECM, Qualys, and BigFix environments across 10K+ US and LATAM servers to ensure patch compliance, application updates, and vulnerability remediation.

Systems Engineer | 1010Data, New York

2022 – 2024

Maintained three datacenters supporting 1,500+ virtual and physical servers, cloud storage, IAM access, onboarding, offboarding, ensuring compliance. Designed and implemented Azure Virtual Desktop environments leveraging Host Pools, Scaling Plans, Workspaces, FSLogix, MSIX, Images, and Azure Entra ID. Decommissioned physical and virtual servers in all datacenters, documenting processes, creating tickets, and updating GLPI inventories for audits. Created Azure Virtual Desktops in production, development, and testing, including end-to-end documentation, streamlining build processes and operational efficiency.

Key Contributions:

- Maintained security and operational stability by upgrading BIOS, firmware, and iDRAC across host servers in multiple datacenters.
- Eliminated vulnerabilities and continued compliance by executing quarterly VMware patch updates on vCenter 7.0 and ESXi 6.7/7.0 hosts.
- Standardized and accelerated server provisioning by deploying and assessing Ubuntu Linux servers using ZTP automation across multiple environments.
- Optimized performance, security, and hardware utilization by administering VMware vSphere across three datacenters with 100 hosts and 350 virtual machines.
- Improved operational efficiency and reduced manual workloads by developing PowerShell scripts automating Veeam backups and Zabbix monitoring tasks.
- Sustained endpoint protection standards by applying Windows and application updates daily, remediating security vulnerabilities, and resolving CrowdStrike issues.

Oversaw daily operations across 15 datacenters, managing 100 servers, 18 SANs, backup systems, and 15 environmental monitoring nodes while guiding junior engineers remotely. Administered 30 ESXi hosts, 12 Hyper-V hosts, and 500+ virtual servers with Distributed Resource Scheduler and High Availability across U.S., Central America, South America, and Caribbean data centers. Maintained VMware and Hyper-V environments, ensuring sufficient storage, network connectivity, patch compliance, and adherence to security policies to prevent operational disruptions. Applied industry best practices for server security and sustained up-to-date operating system and application updates across all Intel-based systems. Administered Commvault backup environment upgrades from versions 9.0 to 11.0, coordinating deployments, storage provisioning, policy scheduling, and deduplication for secure and reliable data protection. Allocated disk space for SAN equipment including Pure FlashArray, NetApp FAS series, and EMC systems within multi-cluster environments to guarantee business continuity.

Key Contributions:

- Optimized infrastructure costs by reducing VMware licensing and support fees through executing over 50 virtual machine migrations from VMware to Hyper-V.
- Enhanced cybersecurity, system functionality, and vendor compliance by upgrading VMware vCenter servers and hosts from version 5.1 to 6.5 across international sites.
- Enabled secure and efficient organization-wide collaboration by administering Microsoft 365 suite integrated with Exchange Online, Azure, SharePoint, Teams, and OneDrive.
- Increased storage capacity and availability across clusters by expanding datastores in vCenter and Virtual Machine Manager and provisioning new volumes to ESXi and Hyper-V hosts.
- Maintained compliance, business continuity, and workload availability by managing Azure security and disaster recovery configurations with Entra ID, Intune, storage accounts, and ASR.
- Ensured host and virtual machine reliability by monitoring network and server health using SolarWinds Orion and Virtualization Manager for hardware, software, memory, CPU, and disk utilization.

EDUCATION

Bachelor of Science, Electrical Engineering | Florida International University, Miami, FL

CERTIFICATIONS

Google Cloud Leader Certification | Microsoft Certified Azure Fundamentals | Microsoft Certified Azure Artificial Intelligence Fundamentals | Microsoft Certified Azure Artificial Intelligence Engineer Associate | Microsoft Certified Professional | Microsoft Certified Systems Engineer | VMware Virtual Certified Associate – Data Center Virtualization 5.5 | VMware Virtual Certified Professional – Data Center Virtualization 5.5, 6.0 | Zerto Certified Professional Basic – 4.5, 5.5

TECHNICAL PROFICIENCIES

Artificial Intelligence Tools: ChatGPT 4.0, 4.1 | DeepSeek 3.0 | OpenAI | Claude Sonnet 3.5 | Google Gemini | Microsoft 365 Copilot | Perplexity

Network Monitoring Tools: Solarwinds (Orion & Virtualization Manager) | What's Up Gold Professional Edition | Quest Free Network Tools | Network Scanner | Ping Plotter 5 | Advanced IP Scanner | Zabbix | Elastic ELK Stack | Grafana

Operating Systems: OnTap 8.2.1 | Windows (10, 11, 2012/R2, 2016, 2019, 2022) | Linux (Ubuntu 20, 22; Red Hat Enterprise Linux 8.6, 8.8) | Mac OS X | VMware ESXi (6.0, 6.5, 6.7, 7.0, 8.0)

Software & Platforms: Microsoft Azure | System Center Virtual Machine Manager (SCVMM) | Hyper-V 2019 | Active Directory Users and Computers | Group Policy Manager Console | Exchange System/Management Console | Exchange Control Panel 2010/2013 | Exchange 0365 / Exchange Online Protection (EOP) | Forefront Online Protection for Exchange (FOPE) | Microsoft Office 365 | Microsoft Visio (2003, 2007) | Microsoft Project (2003, 2007) | SMS 2003 | System Center Configuration Manager (SCCM 2012) / Microsoft Endpoint Configuration Manager (MECM) | Failover Cluster Manager | Exchange Admin Console (2013/2016) | VMware vSphere ESXi / Client / Web Console (5.5, 6.0, 6.5, 6.7, 7.0, 8.0) | UCS Central v2.0(1p) | OnCommand System Manager 3.2.1 | NetApp Configuration Manager 3.0RC1 | EMC Unisphere v3.1.1 / Unisphere Central 4.0.0 | Cisco Unified Computing System Manager 3.1 (1e) | Databricks | McAfee Endpoint Encryption | Symantec Partition Magic / Anti-virus / Firewall | CrowdStrike | Qualys 3.19.0.2-5 | Seagate / Veritas Backup Exec / Exec View | Commvault 9/10/11 | Veeam 12 (Backup & Replication) | CA Unicenter DSM / Software Delivery Explorer | BigFix Console v10/v11 | Puppet | Clonezilla | PowerQuest Drive Image Pro | Symantec Ghost | Knoppix | RVTools | Cisco AnyConnect / ClearPass | Mimecast v4.0.17 | Barracuda Control Cloud | Folder Sizes 7.0 | PowerShell / Exchange Server PowerShell | Python / Azure CLI | Globalscape 7 | Atlassian Jira / Confluence | ServiceNow / Service Desk | Asset Vision (Scalable) | ManageEngine | Datadog | Thycotic Secret Server 9.0 | CyberArk v12.6.12 | Symantec PCAnywhere | CA Unicenter Remote Control | Bomgar / Radmin | Lucidchart | PyCharm / Visual Studio Code | MSIX Hero | Idera SQL Diagnostic Manager 8.5 | Bitbucket / GitHub

Hardware: DR Replication Appliance (Zerto) | Barracuda Web Filter 310 | Servers / Routers / Switches | Security Cameras | Android / Apple Smartphones and Tablets | Load Balancers – BIG-IP Configuration Utility (F5), Citrix / ADC | Cisco UCS 5108 Chassis | Cisco B200 M3/M2 / B2-M5 server blades | APC Smart-UPS Rack Mount | Bomgar | Avtech Room Alert

Storage (SAN/NAS): Pure FlashArray | NetApp FAS (2020, 3240, 8020, 8040) | EMC (3100, 3150, CX300, VNX E) | Cisco Nexus | QNAP NAS
